Full-Stack Software Engineer specializing in scalable backend systems and secure RESTful APIs, currently upskilling in Java and Spring Boot. Technical foundation in Python/Django with experience in enterprise engineering environments, Agile sprints, and the delivery of clean, maintainable code. Proficient in MySQL database management, Docker containerization, and version control using Git across Linux and Windows CLI environments. Information Systems graduate with a solutions-oriented mindset developed through technical business operations and a commitment to maintaining high-quality technical documentation.

TECHNICAL SKILLS AND CERTIFICATIONS

- Languages: Python, JavaScript, HTML, CSS, C#, C++, Java
- Frameworks & Libraries: Django, Flask, Tailwind, Bootstrap, Spring Boot
- Databases & Storage: MySQL, Firebase, Redis
- Tools & Platforms: Git, GitHub/GitLab, Jira, Confluence, Docker, Linux, Grafana, Google Looker Studio

WORK EXPERIENCE

Software Engineer & System Analyst Intern (2025–2026) – Globe Telecom, Inc., Taguig City

Contributed to backend development and system analysis in Agile sprints, participating in Daily Stand-ups to synchronize sprint progress and technical documentation. Developed an observability dashboard using Google Cloud Platform and Grafana to monitor performance and business metrics for AI-based systems. Engaged in collaborative code reviews to ensure code quality, while performing functional testing and requirements analysis to maintain system reliability.

Selected Projects:

- Developed an observability dashboard using a Grafana stack to monitor logging and metrics for an AI chatbot.
- Assisted in system design documentation for an eSIM project, including requirements analysis and architecture diagrams.

Owner, Operations Manager (2018–2020) – Project PC, Pasig City

Managed a computer retail and CCTV installation business, handling custom hardware builds, hardware/network troubleshooting, and security installation while overseeing all client operations and technical support.

CAD Technician (2010–2014); Project Coordinator (2014–2018) – ABuild, Inc., Mandaluyong City

Drafted technical layouts using AutoCAD and coordinated pre-construction client communications for commercial projects, supporting project bidding, execution, and architectural and technical compliance oversight.

PROJECTS

MetroMetrics – Web-Based Transit Analytics Platform | Lead Developer

Awarded “Best Capstone Project.” Designed and developed a scalable transit analytics platform using Django, XGBoost, MySQL, and Redis. Architected secure RESTful APIs to deliver predictive crowding insights and implemented Celery with Redis as a message broker to manage asynchronous forecasting tasks and background job scheduling. Optimized system responsiveness by offloading compute-intensive Machine Learning processes to worker queues. Deployed the application using Docker-based containerization and integrated interactive data dashboards for analytics visualization.

ROMdle Helper – Flask Web App | Solo Project

Developed a word-based assistant tool using Python and Flask, implementing pattern-matching and search wildcard logic to facilitate dynamic query resolution and data filtering. Integrated Google Sheets API as a lightweight content management system to enable real-time, community-driven database updates and collaborative data management. Designed REST endpoints and structured backend logic to support scalable query handling and improve overall data retrieval efficiency.

EDUCATION

Bachelor of Science in Information Systems

De La Salle–College of Saint Benilde | 2022-2026

Computer Engineering Coursework

University of the Philippines Diliman | 2007-2009

AWARDS AND ACHIEVEMENTS

Best Capstone Project Award – *MetroMetrics (Transit Analytics Platform)*, De La Salle–College of Saint Benilde

Consistent Dean’s Lister Awardee (All Enrolled Terms) – School of Management and Information Technology
