Backend-focused Information Systems graduate with strong experience in full-stack development and predictive analytics. Skilled in designing and implementing scalable backend systems and secure RESTful APIs using Django. Hands-on experience with asynchronous processing and background task scheduling using message brokers to support data-intensive workflows and improve system performance. Solid understanding of the full software development life cycle (SDLC), Agile practices, and version control using Git in collaborative team environments. Knowledgeable in security best practices, including OWASP standards, secure authentication and authorization, password hashing and encryption, and protection of sensitive data (PII).

## EDUCATION

### Bachelor of Science in Information Systems

De La Salle–College of Saint Benilde | 2022-2026

### Computer Engineering Coursework

University of the Philippines Diliman | 2007-2009

## AWARDS AND ACHIEVEMENTS

**Best Capstone Project Award** – *MetroMetrics (Transit Analytics Platform)*, De La Salle–College of Saint Benilde

**Consistent Dean's Lister Awardee (All Enrolled Terms)** – School of Management and Information Technology

## TECHNICAL SKILLS AND CERTIFICATIONS

- Languages: Python, JavaScript, HTML, CSS, C#, C++ (Arduino/IoT)
- Frameworks & Libraries: Django, Flask, Tailwind, Bootstrap, XGBoost, Pandas, NumPy
- Databases & Storage: MySQL, Firebase, Redis (caching & task queue broker)
- Tools & Platforms: Git, GitHub/GitLab, Docker, Linux, Grafana, Google Looker Studio

## WORK EXPERIENCE

### Software Engineer & System Analyst Intern (2025) – Globe Telecom, Inc., Taguig City

Contributed to backend development and system analysis in agile sprints, supporting architecture design, documentation, and functional testing within an enterprise engineering team. Worked with Google Cloud Platform and Grafana to monitor logging and metrics for AI-based systems.

#### Selected Projects:

- Developed an observability dashboard using a Grafana stack to monitor logging and metrics for an AI chatbot.
- Assisted in system design documentation for an eSIM project, including requirements analysis and architecture diagrams.

### Owner, Operations Manager (2018–2020) – Project PC, Pasig City

Managed a computer retail and CCTV installation business, handling custom PC builds, hardware/network troubleshooting, and client operations.

### CAD Technician (2010–2014); Project Coordinator (2014–2018) – ABuild, Inc., Mandaluyong City

Drafted technical layouts using AutoCAD and coordinated pre-construction client communications for commercial projects, supporting project bidding and execution.

## PROJECTS

### MetroMetrics – Web-Based Transit Analytics Platform | *Lead Developer*

Awarded “Best Capstone Project.” Designed and developed a scalable transit analytics platform using Django, XGBoost, MySQL, and Redis. Architected secure RESTful APIs to deliver predictive crowding insights and implemented Celery with Redis as a message broker to manage asynchronous forecasting tasks and background job scheduling. Optimized system responsiveness by offloading compute-intensive ML processes to worker queues. Deployed the application using Docker-based containerization and integrated interactive data dashboards for analytics visualization.

### ROMdle Helper – Flask Web App | *Solo Project*

Developed a word-based assistant tool using Python and Flask, implementing pattern-matching and wildcard search logic for dynamic query resolution. Integrated the Google Sheets API as a lightweight content management system to enable real-time, community-driven database updates. Designed REST endpoints and structured backend logic to support scalable query handling.
